**Cinelab, Beijing**  
A sustainable, safe film processing lab

**Nokia, Beijing**  
Inside-out\* architecture for an integrated, collaborative, highly secure workplace

## Sustainable workplaces

### *A holistic approach*

M Moser's approach is one of full integration. From the project onset, your business objectives drive a collaborative effort in engineering, design and planning. The result is a healthier, more productive workplace that uses resources and energy more efficiently. Our in-house accredited professionals can also help your workplace achieve stringent BREEAM/LEED certification for sustainability.

## Technical facilities & Labs

### *Engineering effective critical environments*

M Moser seamlessly integrates engineering, technology, space planning and design to ensure that everything from air conditioning and fire safety to IT and critical factors like Tier I, II, III and III systems operate at maximum effectiveness. M Moser's technology team can also propose ways to meet your future needs smoothly and economically.

## Inside-Out architecture

### *Designing with core needs in mind*

M Moser's services focus on the end-user: Each solution is unique because it evolves from the needs of the individual client. In architectural projects, this means designing from the 'inside-out', with the function of a building's interior leading directly to the form of its exterior.
